

Certified Drinking Water Labs in Montana

Checkmarks indicate the lab has received certification from the Montana Department of Public Health and Human Services (DPHHS) to analyze the listed parameter or parameter category. You can learn more about this quality assurance process via the DPHHS Water Laboratory Certification Program webpage.

****It is important to call the lab before sending samples to get the most up to date information on analyses, costs, and hold times****

¹ Common inorganic parameters include: pH, alkalinity, hardness, sodium, chloride and various metals

² Common metals include: copper, lead, arsenic and manganese

³ Organic compounds are a variety of naturally occurring and synthetic molecules, including pesticides, petroleum products, etc.

Energy Laboratories (Billings and Helena), DPHHS Environmental Laboratory, Bridger Analytical Lab, and Montana Environmental Laboratory can do analyses for iron bacteria and sulfur reducing bacteria.
